

## Pulp Clamps

Pulp Clamps - There is a variety of lift truck attachments available to make the machinery a lot more effective. A snowplow attachment can be mounted to the front part of the lift truck. A scoop bucket could be useful whenever the job requires moving gravel, snow, sand, or soil. A double block handler allows the forklift operator to pick up two loads and stack them side-by-side. Many of these attachments are really great for light to medium tasks.

One more forklift attachment is the package lift clamp, which can lift and move heavier pallets. Furthermore, pallet crane forks may be used so as to carry and move pallets with an overhead crane. A drum clamp attachment is useful for moving heavy drums from one place to another without having to make use of a pallet. Forklift mounted hoppers permit material to be moved and dumped without having to handle it by hand. These hoppers when the bumper is released are self dumping.

There are even attachments obtainable which could transform the forklift right into a commercial mop or broom. Such attachments are ideal for cleaning boat docks, storehouse floors and parking areas. Lift truck mounted platforms come outfitted with dual entry doors and could be hooked up to be able to transport staff from one locale to another. The mounted platform accessory is ideal for reaching places that are difficult to access, specifically if you have products or supplies stored in out of the way areas or way up high.

Attachments could be a really valuable piece of equipment when put in a forklift, changing a usual forklift right into a mobile crane unit. It is most helpful when maneuvering unstable or difficult loads. This accessory could either be mounted on the carriage itself, telescopic, or be attached or even forklift mounted.
