

Remanufactured Lift Truck Parts

Remanufactured Forklift Parts - Lift trucks are somewhat expensive pieces of equipment because a new electric lift truck model could cost starting from \$18,000 to \$25,000, for a five thousand pound equipment. Moreover, some thousands of dollars will have to be invested in a battery charger and battery. The same internal combustion lift truck of similar lift capacity will cost a little less and the diesel units that are capable of heavier lifting capacities can cost upwards of one hundred thousand dollars. Reconditioned lift trucks are a choice to save a large amount of money since they cost less than half the price of new units.

Several people think they will deal with more repairs problems if they purchase a reconditioned lift truck and are apprehensive of acquiring a used forklift at a sale price. A properly reconditioned forklift would work just in addition to a new one and whichever doubts of upkeep are unfounded. Even though your lift would get heavy use, as long as you take proper care of the machine, it will serve all your needs and possibly save you lots of cash.

When considering buying a used lift truck, it is essential to determine what the seller means by the term refurbished or reconditioned. Numerous companies do an excellent job of completely making over the model previous to reselling it. This includes disassembling the lift truck, rebuilding the engine, sandblasting the lift and next reassembling everything and finishing with a fresh coat of paint.

To correctly and meticulously reconstruct a lift truck engine, a good business would entirely disassemble it. A heat cleaning system could then be utilized to clean all the parts. As soon as this step has been finished, all of the parts are checked to see if they have any extensive wear, any defects or breakage. Certain components such as connecting rods, cylinder heads, crankshafts and cylinder blocks are reground, resurfaced and resized if needed. Several parts like for example nuts, bolts, gears and so on. are replaced or repaired as needed.

Once the overhaul has been done, the engine is rebuilt manually. After being put back together, a series of tests are applied to the running machinery to be able to check all of the components and make sure there are no leaks or problems. If any problems occur, the necessary adjustments are made.

There should be no reason to be concerned about buying a refurbished or reconditioned lift truck from quality sellers. The process of rebuilding the machinery ensures the utmost in dependability. Maintenance expenses can really work out to be less for the reason that you will avoid the initial phase of higher maintenance projections which a new lift truck has as it is broken in. By following routine repairs schedules and taking care of the equipment properly, a reconditioned lift truck will serve you well.
