

## Carriage Roller

Carriage Rollers - Particularly designed bearings referred to as carriage rollers are regularly found on lift masts because they enable them to work better within challenging environmental surroundings. The standard lift mast is regularly subject to frequent oscillations, shocks, static loads, and vibrations and high dynamics. This equipment is regularly exposed to environmental influences such as cold, heat, dust, aggressive ambient air, moisture and contamination. Hence, the lift masts' guidance arrangements have to be particularly tough and have a particular high load carrying capacity.

To help compete in lots of various environmental surroundings, carriage rollers were designed for numerous lift masts. While having the ability to handle a particularly high load carrying capacity, these bearings provided a cost-effective operational security for the lift masts' guidance arrangements.
